MSU — The Land “GRAB” College

Now let me get this straight! MSU makes a deal with David Morris, an Eagle Township farmer, to donate a significant piece of his agricultural property from his estate to be used for the furtherance of MSU’s “Land Grant” goals because the university is all about farmland preservation and the protecting the environment. MSU, as the first land grant college in the country, seemed like a perfect fit. However, the MSU David Morris knew and loved has been transformed into a liberal bastion for the new climate change agenda to save the planet from the evils of fossil fuels.

In conjunction with the Lansing Economic Area Partnership (LEAP), the Michigan Economic Development Corporation (MEDC), the SOARS fund from the State of Michigan, and the Clinton County Planning Commission and the Board of Commissioners it would appear that a deal is close to coming to fruition that will change the landscape of Eagle Township forever. The area north of Grand Ledge will be transformed into a massive complex for an electric battery company or a chip production site. Currently, there are many individuals in Clinton County and Eagle Township who are working to stop this land grab.

It’s unconscionable that the collusion of various groups determined to bring a foreign based company into a partnership with with a major automotive company will override the will of the people in Eagle Township. Decisions will be made regarding the final outcome over the next few months. Anyone wanting to know more or to be a part of that meeting please feel free to go to Eagle Township on March 2, 2023, at the Eagle Park Reception Hall from 4:00 to 6:30 p.m.

The “Fundamental Transformation” is almost complete

Truth be known, none of this should be happening at all. Our nation and our state are all part of the new world order agenda that is in the process of transforming all aspects of our lives, just as Barack Obama promised in 2008. We are letting foreign nations purchase our land and start businesses in our country. Why aren’t American companies doing that?

Our “energy plan” is to shut down all of our coal fired and gas energy plants, but China and India continue to build them at a record pace. We are looking to install more solar farms and wind mills on farmland all over Michigan, even though both are poor sources of energy; have a limited life cycle; and will never meet the electrical demand as we are forced to buy electric cars.

Statistics show that people don’t want the restrictions that electric vehicles will impose on them and their travel expectations. The facts show that at the end of 2021, Michigan had only 17,000 electric vehicles in service. Michigan currently has only a small number public DC fast charging stations, with most of them concentrated in the lower peninsula - in Detroit, Ann Arbor, Lansing and Grand Rapids. Current electric vehicles come with a Level 1 charger, which can take three or more days to charge. A Level 2 charger, which can charge an electric vehicle in six hours, can be purchased and needs to be installed in one’s home. These can cost between \$300 and \$1000. MOST PEOPLE DO NOT WANT TO BUY AN ELECTRIC CAR — but under the Biden/Whitmer plan we will be forced into using a technology that will change our lives forever — and not for the better!

In the future, we will have a significantly reduced electrical capacity but will have a higher demand. I don't see that working well. We are headed down a path that is unsustainable. President Biden is more concerned about the energy needs of Europe than he is about our own, so he going to provide them with Nuclear energy, but we can't have it in our country. We can't have gas pipelines, so we will have to transport it by truck or train, which is more dangerous and potentially more harmful to the environment. We have seen the slow transformation of our country for the last 50 years or more, as our universities and public schools have become proponents of the liberal agenda. We have let our core values become watered down, and society is being corrupted by the new "Woke" ideologies that permeate every aspect of our lives. Our schools are more concerned about what gender kids feel they are, and how to help boys become girls and girls become boys, all at the cost of a real education.

What can we do to make a difference?

As individuals who believe in what our country was founded upon, and who want a future for the generations that will follow us, we need to do all we can to make a difference over the next two years. We have been marginalized because we do not have a voice in either the broadcast nor print media. To have an impact, we need to find a way to get our message out that will represent our conservative Judeo-Christian core values.

If you want to help us make a difference, please consider becoming active in the Clinton County Republican Party. We are in the process of initiating various steps to get our message out and to engage the people of Clinton County to restore accountability in our schools and demand that our elected officials represent us.

If you would like more information please feel free to contact me!
